Angry Birds

Software verification

```
[nmote@monarch level]$ antf check-nullness
Searching for build.xml ...
Buildfile: /home/gws/nmote/demo/java/Translation/build.xml

clean:
  [delete] Deleting directory /home/gws/nmote/demo/java/Translation/bin

check-nullness:
  [mkdir] Create dir: /home/gws/nmote/demo/java/Translation/bin
[jsr308.javac] Compiling 14 source files to /home/gws/nmote/demo/java/Translation/bin
[jsr308.javac] javac 1.7.0-jsr308-1.1.4
```

Which is more fun?

- Play games
- Prove your programs correct

Angry Birds:

02 Nov 2011: 200000 years play-time

11 May 2012: downloaded one billion times

Crowd-sourced verification

1. Make software verification **easy** and **fun**
2. Make the game **accessible** to everyone
3. Harness the power of the **crowd**

Goal: Verify software while you wait for the bus

```
File Edit View Terminal Help
public static Intersection factory(Kind kind)
{
    if (kind == Kind.SUBNETWORK)
        throw new IllegalArgumentException(
            "IntersectionFactory passed Kind.SUBNETWORK. Use subnetworkFacto
ry instead.");
    else if (kind == Kind.NULL_TEST)
        return new NullTest();
    else
        return new Intersection(kind);
}

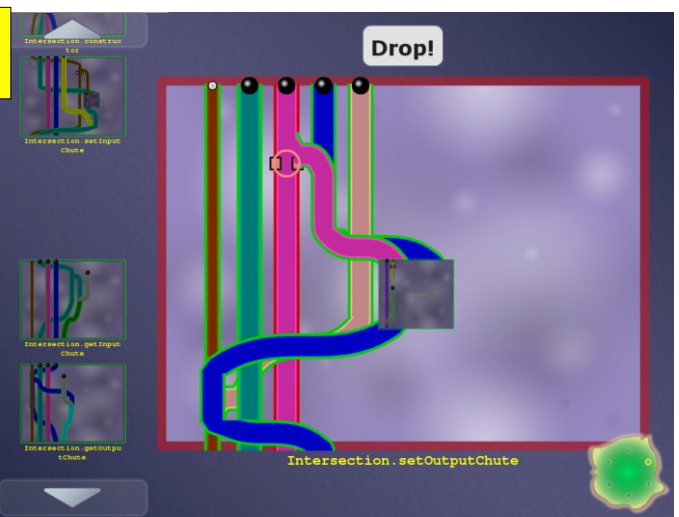

public static Subnetwork subnetworkFactory(String methodName)
{
    return new Subnetwork(methodName);
}

/**
 * Creates a new Intersection object of the given kind with empty i/o ports-
 */
public Intersection(Kind kind)
{
    if (!checkIntersectionKind(kind)) // if this is not a valid Kind for this
        // implementation of Intersection
        throw new IllegalArgumentException("Invalid Intersection Kind " + kind
            + " for this implementation");

    intersectionKind = kind; inputChutes = new ArrayList<? Nullable >/Chute
    outputChutes = new ArrayList<? Nullable >/Chute();
}
263,10 56%
```

Code

Game

Automatic translation

Encodes a constraint system

Highly-skilled, expensive labor

Volunteers

```
File Edit View Terminal Help
public static Intersection factory(Kind kind)
{
    if (kind == Kind.SUBNETWORK)
        throw new IllegalArgumentException(
            "IntersectionFactory passed Kind.SUBNETWORK. Use subnetworkFacto
ry instead.");
    else if (kind == Kind.NULL_TEST)
        return new NullTest();
    else
        return
}

public static Subnetwork subnetworkFactory(String methodName)
{
    return
}

/**
 * Creates a new Intersection object of the given kind with empty i/o ports-
 */
public Intersection(Kind kind)
{
    if (!checkIntersectionKind(kind)) // if this is not a valid Kind for this
        // implementation of Intersection
        throw new IllegalArgumentException("Invalid Intersection Kind " + kind
            + " for this implementation");

    intersectionKind = kind; inputChutes = new ArrayList<? Nullable >/Chute
    outputChutes = new ArrayList<? Nullable >/Chute();
}
230,7 56%
```

Verified software (with proof/ annotations)

Connection-run---V

Connection

Connection-vulture--GET

Connection-vulture--SET

Connection-client--GET

Connection-in--GET

Example: null pointer errors

Goal: no dereference of null

Pipe ↔ a variable

Pipe width ↔ narrow: non-null
wide: maybe null

Ball ↔ a value

Ball size ↔ small: non-null
large: maybe null

Pinch point ↔ dereference

Unmodifiable pipe/ball ↔ literal **null**, object creation

Program \leftrightarrow game correspondence

Pipe \leftrightarrow a variable

Pipe width \leftrightarrow type of the variable

Ball \leftrightarrow a value

Ball size \leftrightarrow a property of the value

Pinch point \leftrightarrow requirement

Unmodifiable pipe/ball \leftrightarrow requirement

Intuition: dataflow

Other examples

SQL injection

unintended side effects

format string and regexp validation

incorrect equality checks

race conditions and deadlocks

units of measurement

aliasing

...

Challenges

Will the game be fun?

Better than waiting for the bus

Do people outperform verification algorithms?

Inference is undecidable

Hypothesis:

no for correct, verifiable programs

yes for incorrect or unverifiable programs

Game players only have to **reduce** overall verification cost, not fully verify the program

Scoring & Collaboration

1. Game score influenced by

- Collisions (verifiability)
- Use of buzzsaws (trusted assumptions)
- Pipe widths, distinguishing input and output pipes (re-usability of modules)

2. Collaboration & competition between players

- High-score boards
- Collaborative teams solve challenges
- Social aspects (chats, forums, ...)

Scalability & Optimization

1. Brute force not feasible for large programs
2. Scale-up verification by
 - Crowdsourcing games
 1. Distribute games to humans
 2. Reconfigure games to adjust difficulty
 3. Redundancy
 - Automatic inference and optimizations
 1. How many easy challenges should be left for humans to feel good about progress?

FoldIt

1. Proteomics game at UW
2. Effectively created the genre of games that solve hard problems
3. Three Nature papers in under 2 years
4. Over 240,000 players, 200+ new per day

FoldIt

The screenshot displays the FoldIt game interface. At the top, it shows the player's rank (317) and score (2534) for a puzzle titled "Beginner Puzzle 8 (<150): Fruit Fly". The interface includes a "Cookbook" on the left, a "Group Competition" table, a "Soloist Competition" table, and a toolbar at the bottom with various actions like "Shake Sidechains", "Mutate Sidechains", "Wiggle All", "Wiggle Backbone", "Wiggle Sidechains", "Unfreeze Protein", "Remove Bands", "Disable Bands", "Align Guide", "Show Alignment", "Reset Structures", and "Reset Puzzle".

Group Competition Table:

#	Group Name	Score
1	Rice Biochemistry	9174
2	Team Commonwealth	9168
3	Ukraine	9088
4	Team Canada	9085
5	Firebird BioChem	9073
6	SETI.Germany	9030
7	Boinc.be	9001

Soloist Competition Table:

#	Player Name	Current	Best
1	Mike Crunching for Physics	-	9242
2	weitzel	-	9235
3	ys719	-	9222
4	jmarki	-	9211
5	kevin_karplus	-	9186
6	J1NXter	-	9185
7	eb.eric	-	9183

Contributions

Gamification of program verification
Game...

- encodes correctness conditions
- utilizes human intuition & insight
- is playable by anyone

Goal: cheaper verification \Rightarrow more verification
