

CS152: Programming Languages

Lecture 6 — Little Trusted Languages; Equivalence

Dan Grossman
Spring 2011

Looking back, looking forward

This is the last lecture using IMP (hooray!). Done:

- ▶ Abstract syntax
- ▶ Operational semantics (large-step and small-step)
- ▶ Semantic properties of (sets of) programs
- ▶ “Pseudo-denotational” semantics

Now:

- ▶ Packet-filter languages and other examples
- ▶ Equivalence of programs in a semantics
- ▶ Equivalence of different semantics

Next lecture: Local variables, lambda-calculus

Packet Filters

Almost everything I know about packet filters:

- ▶ Some bits come in off the wire
- ▶ Some application(s) want the “packet” and some do not (e.g., port number)
- ▶ For safety, only the O/S can access the wire
- ▶ For extensibility, the applications accept/reject packets

Conventional solution goes to user-space for every packet and app that wants (any) packets

Faster solution: Run app-written filters in kernel-space

What we need

Now the O/S writer is defining the packet-filter language!

Properties we wish of (untrusted) filters:

1. Don't corrupt kernel data structures
2. Terminate (within a time bound)
3. Run fast (the whole point)

Should we download some C/assembly code? (Get 1 of 3)

Should we make up a language and “hope” it has these properties?

Language-based approaches

1. Interpret a language.

+ clean operational semantics, + portable, - may be slow (+ filter-specific optimizations), - unusual interface

2. Translate a language into C/assembly.

+ clean denotational semantics, + employ existing optimizers, - upfront cost, - unusual interface

3. Require a conservative subset of C/assembly.

+ normal interface, - too conservative w/o help

IMP has taught us about (1) and (2) — we'll get to (3)

A General Pattern

Packet filters move the code to the data rather than data to the code.

General reasons: performance, security, other?

Other examples:

- ▶ Query languages
- ▶ Active networks
- ▶ Client-side web scripts (Javascript)

Equivalence motivation

- ▶ Program equivalence (we change the program):
 - ▶ code optimizer
 - ▶ code maintainer

- ▶ Semantics equivalence (we change the language):
 - ▶ interpreter optimizer
 - ▶ language designer
 - ▶ (prove properties for equivalent semantics with easier proof)

Note: Proofs may seem easy with the right semantics and lemmas

- ▶ (almost never start off with right semantics and lemmas)

Note: Small-step operational semantics often has harder proofs, but models more interesting things

What is equivalence?

Equivalence depends on *what is observable!*

What is equivalence?

Equivalence depends on *what is observable!*

- ▶ Partial I/O equivalence (if terminates, same ans)

What is equivalence?

Equivalence depends on *what is observable!*

- ▶ Partial I/O equivalence (if terminates, same ans)
 - ▶ **while 1 skip** equivalent to everything

What is equivalence?

Equivalence depends on *what is observable!*

- ▶ Partial I/O equivalence (if terminates, same ans)
 - ▶ **while 1 skip** equivalent to everything
 - ▶ not transitive

What is equivalence?

Equivalence depends on *what is observable!*

- ▶ Partial I/O equivalence (if terminates, same ans)
 - ▶ **while 1 skip** equivalent to everything
 - ▶ not transitive
- ▶ Total I/O equivalence (same termination behavior, same ans)

What is equivalence?

Equivalence depends on *what is observable!*

- ▶ Partial I/O equivalence (if terminates, same ans)
 - ▶ **while 1 skip** equivalent to everything
 - ▶ not transitive
- ▶ Total I/O equivalence (same termination behavior, same ans)
- ▶ Total heap equivalence (same termination behavior, same heaps)
 - ▶ All (almost all?) variables have the same value

What is equivalence?

Equivalence depends on *what is observable!*

- ▶ Partial I/O equivalence (if terminates, same ans)
 - ▶ **while 1 skip** equivalent to everything
 - ▶ not transitive
- ▶ Total I/O equivalence (same termination behavior, same ans)
- ▶ Total heap equivalence (same termination behavior, same heaps)
 - ▶ All (almost all?) variables have the same value
- ▶ Equivalence plus complexity bounds
 - ▶ Is $O(2^{n^n})$ really equivalent to $O(n)$?
 - ▶ Is “runs within 10ms of each other” important?

What is equivalence?

Equivalence depends on *what is observable!*

- ▶ Partial I/O equivalence (if terminates, same ans)
 - ▶ **while 1 skip** equivalent to everything
 - ▶ not transitive
- ▶ Total I/O equivalence (same termination behavior, same ans)
- ▶ Total heap equivalence (same termination behavior, same heaps)
 - ▶ All (almost all?) variables have the same value
- ▶ Equivalence plus complexity bounds
 - ▶ Is $O(2^n)$ really equivalent to $O(n)$?
 - ▶ Is “runs within 10ms of each other” important?
- ▶ Syntactic equivalence (perhaps with renaming)
 - ▶ Too strict to be interesting?

What is equivalence?

Equivalence depends on *what is observable!*

- ▶ Partial I/O equivalence (if terminates, same ans)
 - ▶ **while 1 skip** equivalent to everything
 - ▶ not transitive
- ▶ Total I/O equivalence (same termination behavior, same ans)
- ▶ Total heap equivalence (same termination behavior, same heaps)
 - ▶ All (almost all?) variables have the same value
- ▶ Equivalence plus complexity bounds
 - ▶ Is $O(2^n)$ really equivalent to $O(n)$?
 - ▶ Is “runs within 10ms of each other” important?
- ▶ Syntactic equivalence (perhaps with renaming)
 - ▶ Too strict to be interesting?

In PL and CS152, equivalence usually means total I/O equivalence

Program Example: Strength Reduction

Motivation: Strength reduction

- ▶ A common compiler optimization due to architecture issues

Theorem: $H ; e * 2 \Downarrow c$ if and only if $H ; e + e \Downarrow c$

Proof sketch:

Program Example: Strength Reduction

Motivation: Strength reduction

- ▶ A common compiler optimization due to architecture issues

Theorem: $H ; e * 2 \Downarrow c$ if and only if $H ; e + e \Downarrow c$

Proof sketch:

- ▶ Prove separately for each direction

Program Example: Strength Reduction

Motivation: Strength reduction

- ▶ A common compiler optimization due to architecture issues

Theorem: $H ; e * 2 \Downarrow c$ if and only if $H ; e + e \Downarrow c$

Proof sketch:

- ▶ Prove separately for each direction
- ▶ Invert the assumed derivation, use hypotheses plus a little math to derive what we need

Program Example: Strength Reduction

Motivation: Strength reduction

- ▶ A common compiler optimization due to architecture issues

Theorem: $H ; e * 2 \Downarrow c$ if and only if $H ; e + e \Downarrow c$

Proof sketch:

- ▶ Prove separately for each direction
- ▶ Invert the assumed derivation, use hypotheses plus a little math to derive what we need
- ▶ Hmm, doesn't use induction. That's because this theorem isn't very useful...

Program Example: Nested Strength Reduction

Theorem: If e' has a subexpression of the form $e * 2$,
then $H ; e' \Downarrow c'$ if and only if $H ; e'' \Downarrow c'$
where e'' is e' with $e * 2$ replaced with $e + e$

Program Example: Nested Strength Reduction

Theorem: If e' has a subexpression of the form $e * 2$,
then $H ; e' \Downarrow c'$ if and only if $H ; e'' \Downarrow c'$
where e'' is e' with $e * 2$ replaced with $e + e$

First some useful metanotation:

$$C ::= [\cdot] \mid C + e \mid e + C \mid C * e \mid e * C$$

$C[e]$ is “ C with e in the hole” (inductive definition of “stapling”)

Crisper statement of theorem:

$$H ; C[e * 2] \Downarrow c' \text{ if and only if } H ; C[e + e] \Downarrow c'$$

Program Example: Nested Strength Reduction

Theorem: If e' has a subexpression of the form $e * 2$,
then $H ; e' \Downarrow c'$ if and only if $H ; e'' \Downarrow c'$
where e'' is e' with $e * 2$ replaced with $e + e$

First some useful metanotation:

$$C ::= [\cdot] \mid C + e \mid e + C \mid C * e \mid e * C$$

$C[e]$ is “ C with e in the hole” (inductive definition of “stapling”)

Crisper statement of theorem:

$$H ; C[e * 2] \Downarrow c' \text{ if and only if } H ; C[e + e] \Downarrow c'$$

Proof sketch: By induction on structure (“syntax height”) of C

- ▶ The base case ($C = [\cdot]$) follows from our previous proof
- ▶ The rest is a long, tedious, (and instructive!) induction

Proof reuse

As we have noted a million times, proving is just like programming

The proof of nested strength reduction had nothing to do with $e * 2$ and $e + e$ except in the base case where we used our previous theorem

A much more useful theorem would parameterize over the base case so that we could get the “nested X ” theorem for any appropriate X :

If $(H ; e_1 \Downarrow c$ if and only if $H ; e_2 \Downarrow c)$,
then $(H ; C[e_1] \Downarrow c'$ if and only if $H ; C[e_2] \Downarrow c')$

The proof is identical except the base case is “by assumption”

Small-step program equivalence

These sort of proofs also work with small-step semantics (e.g., our IMP statements), but tend to be more cumbersome, even to state.

Example: The statement-sequence operator is associative. That is,

- (a) For all n , if $H ; s_1 ; (s_2 ; s_3) \rightarrow^n H' ; \mathbf{skip}$ then there exist H'' and n' such that $H ; (s_1 ; s_2) ; s_3 \rightarrow^{n'} H'' ; \mathbf{skip}$ and $H''(ans) = H'(ans)$.
- (b) If for all n there exist H' and s' such that $H ; s_1 ; (s_2 ; s_3) \rightarrow^n H' ; s'$, then for all n there exist H'' and s'' such that $H ; (s_1 ; s_2) ; s_3 \rightarrow^n H'' ; s''$.

(Proof needs a much stronger induction hypothesis.)

One way to avoid it: Prove large-step and small-step *semantics* equivalent, then prove program equivalences in whichever is easier.

Language Equivalence Example

IMP w/o multiply large-step:

$$\begin{array}{c} \text{CONST} \\ \hline H ; c \Downarrow c \end{array} \quad \begin{array}{c} \text{VAR} \\ \hline H ; x \Downarrow H(x) \end{array} \quad \begin{array}{c} \text{ADD} \\ \hline H ; e_1 \Downarrow c_1 \quad H ; e_2 \Downarrow c_2 \\ \hline H ; e_1 + e_2 \Downarrow c_1 + c_2 \end{array}$$

IMP w/o multiply small-step:

$$\begin{array}{c} \text{SVAR} \\ \hline H ; x \rightarrow H(x) \end{array} \quad \begin{array}{c} \text{SADD} \\ \hline H ; c_1 + c_2 \rightarrow c_1 + c_2 \end{array}$$
$$\begin{array}{c} \text{SLEFT} \\ \hline H ; e_1 \rightarrow e'_1 \\ \hline H ; e_1 + e_2 \rightarrow e'_1 + e_2 \end{array} \quad \begin{array}{c} \text{SRIGHT} \\ \hline H ; e_2 \rightarrow e'_2 \\ \hline H ; e_1 + e_2 \rightarrow e_1 + e'_2 \end{array}$$

Theorem: Semantics are equivalent: $H ; e \Downarrow c$ if and only if $H ; e \rightarrow^* c$

Proof: We prove the two directions separately...

Proof, part 1

First assume $H ; e \Downarrow c$ and show $\exists n. H ; e \rightarrow^n c$

Proof, part 1

First assume $H ; e \Downarrow c$ and show $\exists n. H ; e \rightarrow^n c$

Lemma (prove it!): If $H ; e \rightarrow^n e'$, then $H ; e_1 + e \rightarrow^n e_1 + e'$ and $H ; e + e_2 \rightarrow^n e' + e_2$.

- ▶ Proof by induction on n
- ▶ Inductive case uses SLEFT and SRIGHT.

Proof, part 1

First assume $H ; e \Downarrow c$ and show $\exists n. H ; e \rightarrow^n c$

Lemma (prove it!): If $H ; e \rightarrow^n e'$, then $H ; e_1 + e \rightarrow^n e_1 + e'$ and $H ; e + e_2 \rightarrow^n e' + e_2$.

- ▶ Proof by induction on n
- ▶ Inductive case uses SLEFT and SRIGHT.

Given the lemma, prove by induction on derivation of $H ; e \Downarrow c$

Proof, part 1

First assume $H ; e \Downarrow c$ and show $\exists n. H ; e \rightarrow^n c$

Lemma (prove it!): If $H ; e \rightarrow^n e'$, then $H ; e_1 + e \rightarrow^n e_1 + e'$ and $H ; e + e_2 \rightarrow^n e' + e_2$.

- ▶ Proof by induction on n
- ▶ Inductive case uses SLEFT and SRIGHT.

Given the lemma, prove by induction on derivation of $H ; e \Downarrow c$

- ▶ CONST: Derivation with CONST implies $e = c$, and we can derive $H ; c \rightarrow^0 c$

Proof, part 1

First assume $H ; e \Downarrow c$ and show $\exists n. H ; e \rightarrow^n c$

Lemma (prove it!): If $H ; e \rightarrow^n e'$, then $H ; e_1 + e \rightarrow^n e_1 + e'$ and $H ; e + e_2 \rightarrow^n e' + e_2$.

- ▶ Proof by induction on n
- ▶ Inductive case uses SLEFT and SRIGHT.

Given the lemma, prove by induction on derivation of $H ; e \Downarrow c$

- ▶ CONST: Derivation with CONST implies $e = c$, and we can derive $H ; c \rightarrow^0 c$
- ▶ VAR: Derivation with VAR implies $e = x$ for some x where $H(x) = c$, so derive $H ; e \rightarrow^1 c$ with SVAR

Proof, part 1

First assume $H ; e \Downarrow c$ and show $\exists n. H ; e \rightarrow^n c$

Lemma (prove it!): If $H ; e \rightarrow^n e'$, then $H ; e_1 + e \rightarrow^n e_1 + e'$ and $H ; e + e_2 \rightarrow^n e' + e_2$.

- ▶ Proof by induction on n
- ▶ Inductive case uses SLEFT and SRIGHT.

Given the lemma, prove by induction on derivation of $H ; e \Downarrow c$

- ▶ CONST: Derivation with CONST implies $e = c$, and we can derive $H ; c \rightarrow^0 c$
- ▶ VAR: Derivation with VAR implies $e = x$ for some x where $H(x) = c$, so derive $H ; e \rightarrow^1 c$ with SVAR
- ▶ ADD: ...

Part 1, continued

First assume $H ; e \Downarrow c$ and show $\exists n. H ; e \rightarrow^n c$

Lemma (prove it!): If $H ; e \rightarrow^n e'$, then $H ; e_1 + e \rightarrow^n e_1 + e'$ and $H ; e + e_2 \rightarrow^n e' + e_2$.

Given the lemma, prove by induction on derivation of $H ; e \Downarrow c$

- ▶ ...
- ▶ ADD: Derivation with ADD implies $e = e_1 + e_2$, $c = c_1 + c_2$, $H ; e_1 \Downarrow c_1$, and $H ; e_2 \Downarrow c_2$ for some e_1, e_2, c_1, c_2 .

Part 1, continued

First assume $H ; e \Downarrow c$ and show $\exists n. H ; e \rightarrow^n c$

Lemma (prove it!): If $H ; e \rightarrow^n e'$, then $H ; e_1 + e \rightarrow^n e_1 + e'$ and $H ; e + e_2 \rightarrow^n e' + e_2$.

Given the lemma, prove by induction on derivation of $H ; e \Downarrow c$

- ▶ ...
- ▶ ADD: Derivation with ADD implies $e = e_1 + e_2$, $c = c_1 + c_2$, $H ; e_1 \Downarrow c_1$, and $H ; e_2 \Downarrow c_2$ for some e_1, e_2, c_1, c_2 .
By induction (twice), $\exists n_1, n_2. H ; e_1 \rightarrow^{n_1} c_1$ and $H ; e_2 \rightarrow^{n_2} c_2$.

Part 1, continued

First assume $H ; e \Downarrow c$ and show $\exists n. H ; e \rightarrow^n c$

Lemma (prove it!): If $H ; e \rightarrow^n e'$, then $H ; e_1 + e \rightarrow^n e_1 + e'$ and $H ; e + e_2 \rightarrow^n e' + e_2$.

Given the lemma, prove by induction on derivation of $H ; e \Downarrow c$

- ▶ ...
- ▶ ADD: Derivation with ADD implies $e = e_1 + e_2$, $c = c_1 + c_2$, $H ; e_1 \Downarrow c_1$, and $H ; e_2 \Downarrow c_2$ for some e_1, e_2, c_1, c_2 .
By induction (twice), $\exists n_1, n_2. H ; e_1 \rightarrow^{n_1} c_1$ and $H ; e_2 \rightarrow^{n_2} c_2$.
So by our lemma $H ; e_1 + e_2 \rightarrow^{n_1} c_1 + e_2$ and $H ; c_1 + e_2 \rightarrow^{n_2} c_1 + c_2$.

Part 1, continued

First assume $H ; e \Downarrow c$ and show $\exists n. H ; e \rightarrow^n c$

Lemma (prove it!): If $H ; e \rightarrow^n e'$, then $H ; e_1 + e \rightarrow^n e_1 + e'$ and $H ; e + e_2 \rightarrow^n e' + e_2$.

Given the lemma, prove by induction on derivation of $H ; e \Downarrow c$

- ▶ ...
- ▶ ADD: Derivation with ADD implies $e = e_1 + e_2$, $c = c_1 + c_2$, $H ; e_1 \Downarrow c_1$, and $H ; e_2 \Downarrow c_2$ for some e_1, e_2, c_1, c_2 .
By induction (twice), $\exists n_1, n_2. H ; e_1 \rightarrow^{n_1} c_1$ and $H ; e_2 \rightarrow^{n_2} c_2$.
So by our lemma $H ; e_1 + e_2 \rightarrow^{n_1} c_1 + e_2$ and $H ; c_1 + e_2 \rightarrow^{n_2} c_1 + c_2$.
By SADD $H ; c_1 + c_2 \rightarrow c_1 + c_2$.

Part 1, continued

First assume $H ; e \Downarrow c$ and show $\exists n. H ; e \rightarrow^n c$

Lemma (prove it!): If $H ; e \rightarrow^n e'$, then $H ; e_1 + e \rightarrow^n e_1 + e'$ and $H ; e + e_2 \rightarrow^n e' + e_2$.

Given the lemma, prove by induction on derivation of $H ; e \Downarrow c$

- ▶ ...
- ▶ ADD: Derivation with ADD implies $e = e_1 + e_2$, $c = c_1 + c_2$, $H ; e_1 \Downarrow c_1$, and $H ; e_2 \Downarrow c_2$ for some e_1, e_2, c_1, c_2 .
By induction (twice), $\exists n_1, n_2. H ; e_1 \rightarrow^{n_1} c_1$ and $H ; e_2 \rightarrow^{n_2} c_2$.
So by our lemma $H ; e_1 + e_2 \rightarrow^{n_1} c_1 + e_2$ and $H ; c_1 + e_2 \rightarrow^{n_2} c_1 + c_2$.
By SADD $H ; c_1 + c_2 \rightarrow c_1 + c_2$.
So $H ; e_1 + e_2 \rightarrow^{n_1+n_2+1} c$.

Proof, part 2

Now assume $\exists n. H; e \rightarrow^n c$ and show $H; e \Downarrow c$.

Proof, part 2

Now assume $\exists n. H; e \rightarrow^n c$ and show $H; e \Downarrow c$.

Proof by induction on n :

Proof, part 2

Now assume $\exists n. H; e \rightarrow^n c$ and show $H; e \Downarrow c$.

Proof by induction on n :

- ▶ $n = 0$: e is c and CONST lets us derive $H; c \Downarrow c$

Proof, part 2

Now assume $\exists n. H; e \rightarrow^n c$ and show $H; e \Downarrow c$.

Proof by induction on n :

- ▶ $n = 0$: e is c and CONST lets us derive $H; c \Downarrow c$
- ▶ $n > 0$: (Clever: break into *first* step and remaining ones)
 $\exists e'. H; e \rightarrow e'$ and $H; e' \rightarrow^{n-1} c$.

Proof, part 2

Now assume $\exists n. H; e \rightarrow^n c$ and show $H; e \Downarrow c$.

Proof by induction on n :

- ▶ $n = 0$: e is c and CONST lets us derive $H; c \Downarrow c$
- ▶ $n > 0$: (Clever: break into *first* step and remaining ones)
 $\exists e'. H; e \rightarrow e'$ and $H; e' \rightarrow^{n-1} c$.
By induction $H; e' \Downarrow c$.

Proof, part 2

Now assume $\exists n. H; e \rightarrow^n c$ and show $H; e \Downarrow c$.

Proof by induction on n :

- ▶ $n = 0$: e is c and CONST lets us derive $H; c \Downarrow c$
- ▶ $n > 0$: (Clever: break into *first* step and remaining ones)
 $\exists e'. H; e \rightarrow e'$ and $H; e' \rightarrow^{n-1} c$.

By induction $H; e' \Downarrow c$.

So this lemma suffices: If $H; e \rightarrow e'$ and $H; e' \Downarrow c$, then $H; e \Downarrow c$.

Proof, part 2

Now assume $\exists n. H; e \rightarrow^n c$ and show $H; e \Downarrow c$.

Proof by induction on n :

- ▶ $n = 0$: e is c and CONST lets us derive $H; c \Downarrow c$
- ▶ $n > 0$: (Clever: break into *first* step and remaining ones)
 $\exists e'. H; e \rightarrow e'$ and $H; e' \rightarrow^{n-1} c$.
By induction $H; e' \Downarrow c$.
So this lemma suffices: If $H; e \rightarrow e'$ and $H; e' \Downarrow c$, then $H; e \Downarrow c$.

Prove the lemma by induction on derivation of $H; e \rightarrow e'$:

- ▶ SVAR: ...
- ▶ SADD: ...
- ▶ SLEFT: ...
- ▶ SRIGHT: ...

Part 2, key lemma

Lemma: If $H; e \rightarrow e'$ and $H; e' \Downarrow c$, then $H; e \Downarrow c$.

Prove the lemma by induction on derivation of $H; e \rightarrow e'$:

Part 2, key lemma

Lemma: If $H; e \rightarrow e'$ and $H; e' \Downarrow c$, then $H; e \Downarrow c$.

Prove the lemma by induction on derivation of $H; e \rightarrow e'$:

- ▶ SVAR: Derivation with SVAR implies e is some x and $e' = H(x) = c$, so derive, by VAR, $H; x \Downarrow H(x)$.

Part 2, key lemma

Lemma: If $H; e \rightarrow e'$ and $H; e' \Downarrow c$, then $H; e \Downarrow c$.

Prove the lemma by induction on derivation of $H; e \rightarrow e'$:

- ▶ SVAR: Derivation with SVAR implies e is some x and $e' = H(x) = c$, so derive, by VAR, $H; x \Downarrow H(x)$.
- ▶ SADD: Derivation with SADD implies e is some $c_1 + c_2$ and $e' = c_1 + c_2 = c$, so derive, by ADD and two CONST, $H; c_1 + c_2 \Downarrow c_1 + c_2$.

Part 2, key lemma

Lemma: If $H; e \rightarrow e'$ and $H; e' \Downarrow c$, then $H; e \Downarrow c$.

Prove the lemma by induction on derivation of $H; e \rightarrow e'$:

- ▶ SVAR: Derivation with SVAR implies e is some x and $e' = H(x) = c$, so derive, by VAR, $H; x \Downarrow H(x)$.
- ▶ SADD: Derivation with SADD implies e is some $c_1 + c_2$ and $e' = c_1 + c_2 = c$, so derive, by ADD and two CONST, $H; c_1 + c_2 \Downarrow c_1 + c_2$.
- ▶ SLEFT: Derivation with SLEFT implies $e = e_1 + e_2$ and $e' = e'_1 + e_2$ and $H; e_1 \rightarrow e'_1$ for some e_1, e_2, e'_1 .

Part 2, key lemma

Lemma: If $H; e \rightarrow e'$ and $H; e' \Downarrow c$, then $H; e \Downarrow c$.

Prove the lemma by induction on derivation of $H; e \rightarrow e'$:

- ▶ SVAR: Derivation with SVAR implies e is some x and $e' = H(x) = c$, so derive, by VAR, $H; x \Downarrow H(x)$.
- ▶ SADD: Derivation with SADD implies e is some $c_1 + c_2$ and $e' = c_1 + c_2 = c$, so derive, by ADD and two CONST, $H; c_1 + c_2 \Downarrow c_1 + c_2$.
- ▶ SLEFT: Derivation with SLEFT implies $e = e_1 + e_2$ and $e' = e'_1 + e_2$ and $H; e_1 \rightarrow e'_1$ for some e_1, e_2, e'_1 . Since $e' = e'_1 + e_2$ inverting assumption $H; e' \Downarrow c$ gives $H; e'_1 \Downarrow c_1$, $H; e_2 \Downarrow c_2$ and $c = c_1 + c_2$.

Part 2, key lemma

Lemma: If $H; e \rightarrow e'$ and $H; e' \Downarrow c$, then $H; e \Downarrow c$.

Prove the lemma by induction on derivation of $H; e \rightarrow e'$:

- ▶ SVAR: Derivation with SVAR implies e is some x and $e' = H(x) = c$, so derive, by VAR, $H; x \Downarrow H(x)$.
- ▶ SADD: Derivation with SADD implies e is some $c_1 + c_2$ and $e' = c_1 + c_2 = c$, so derive, by ADD and two CONST, $H; c_1 + c_2 \Downarrow c_1 + c_2$.
- ▶ SLEFT: Derivation with SLEFT implies $e = e_1 + e_2$ and $e' = e'_1 + e_2$ and $H; e_1 \rightarrow e'_1$ for some e_1, e_2, e'_1 .
Since $e' = e'_1 + e_2$ inverting assumption $H; e' \Downarrow c$ gives $H; e'_1 \Downarrow c_1$, $H; e_2 \Downarrow c_2$ and $c = c_1 + c_2$.
Applying the induction hypothesis to $H; e_1 \rightarrow e'_1$ and $H; e'_1 \Downarrow c_1$ gives $H; e_1 \Downarrow c_1$.

Part 2, key lemma

Lemma: If $H; e \rightarrow e'$ and $H; e' \Downarrow c$, then $H; e \Downarrow c$.

Prove the lemma by induction on derivation of $H; e \rightarrow e'$:

- ▶ SVAR: Derivation with SVAR implies e is some x and $e' = H(x) = c$, so derive, by VAR, $H; x \Downarrow H(x)$.
- ▶ SADD: Derivation with SADD implies e is some $c_1 + c_2$ and $e' = c_1 + c_2 = c$, so derive, by ADD and two CONST, $H; c_1 + c_2 \Downarrow c_1 + c_2$.
- ▶ SLEFT: Derivation with SLEFT implies $e = e_1 + e_2$ and $e' = e'_1 + e_2$ and $H; e_1 \rightarrow e'_1$ for some e_1, e_2, e'_1 .
Since $e' = e'_1 + e_2$ inverting assumption $H; e' \Downarrow c$ gives $H; e'_1 \Downarrow c_1$, $H; e_2 \Downarrow c_2$ and $c = c_1 + c_2$.
Applying the induction hypothesis to $H; e_1 \rightarrow e'_1$ and $H; e'_1 \Downarrow c_1$ gives $H; e_1 \Downarrow c_1$.
So use ADD, $H; e_1 \Downarrow c_1$, and $H; e_2 \Downarrow c_2$ to derive $H; e_1 + e_2 \Downarrow c_1 + c_2$.

Part 2, key lemma

Lemma: If $H; e \rightarrow e'$ and $H; e' \Downarrow c$, then $H; e \Downarrow c$.

Prove the lemma by induction on derivation of $H; e \rightarrow e'$:

- ▶ SVAR: Derivation with SVAR implies e is some x and $e' = H(x) = c$, so derive, by VAR, $H; x \Downarrow H(x)$.
- ▶ SADD: Derivation with SADD implies e is some $c_1 + c_2$ and $e' = c_1 + c_2 = c$, so derive, by ADD and two CONST, $H; c_1 + c_2 \Downarrow c_1 + c_2$.
- ▶ SLEFT: Derivation with SLEFT implies $e = e_1 + e_2$ and $e' = e'_1 + e_2$ and $H; e_1 \rightarrow e'_1$ for some e_1, e_2, e'_1 .
Since $e' = e'_1 + e_2$ inverting assumption $H; e' \Downarrow c$ gives $H; e'_1 \Downarrow c_1, H; e_2 \Downarrow c_2$ and $c = c_1 + c_2$.
Applying the induction hypothesis to $H; e_1 \rightarrow e'_1$ and $H; e'_1 \Downarrow c_1$ gives $H; e_1 \Downarrow c_1$.
So use ADD, $H; e_1 \Downarrow c_1$, and $H; e_2 \Downarrow c_2$ to derive $H; e_1 + e_2 \Downarrow c_1 + c_2$.
- ▶ SRIGHT: Analogous to SLEFT.

The cool part, redux

Step through the SLEFT case more visually:

By assumption, we must have derivations that look like this:

$$\frac{H; e_1 \rightarrow e'_1}{H; e_1 + e_2 \rightarrow e'_1 + e_2} \qquad \frac{H; e'_1 \Downarrow c_1 \quad H; e_2 \Downarrow c_2}{H; e'_1 + e_2 \Downarrow c_1 + c_2}$$

Grab the hypothesis from the left and the left hypothesis from the right and use induction to get $H; e_1 \Downarrow c_1$.

Now go grab the one hypothesis we haven't used yet and combine it with our inductive result to derive our answer:

$$\frac{H; e_1 \Downarrow c_1 \quad H; e_2 \Downarrow c_2}{H; e'_1 + e_2 \Downarrow c_1 + c_2}$$

A nice payoff

Theorem: The small-step semantics is deterministic:
if $H; e \rightarrow^* c_1$ and $H; e \rightarrow^* c_2$, then $c_1 = c_2$

A nice payoff

Theorem: The small-step semantics is deterministic:

if $H; e \rightarrow^* c_1$ and $H; e \rightarrow^* c_2$, then $c_1 = c_2$

Not obvious (see SLEFT and SRIGHT), nor do I know a direct proof

- ▶ Given $((1 + 2) + (3 + 4)) + (5 + 6) + (7 + 8)$ there are many execution sequences, which all produce 36 but with different intermediate expressions

A nice payoff

Theorem: The small-step semantics is deterministic:

if $H; e \rightarrow^* c_1$ and $H; e \rightarrow^* c_2$, then $c_1 = c_2$

Not obvious (see SLEFT and SRIGHT), nor do I know a direct proof

- ▶ Given $((1 + 2) + (3 + 4)) + (5 + 6) + (7 + 8)$ there are many execution sequences, which all produce 36 but with different intermediate expressions

Proof:

- ▶ Large-step evaluation is deterministic (easy proof by induction)
- ▶ Small-step and and large-step are equivalent (just proved that)
- ▶ So small-step is deterministic
- ▶ Convince yourself a deterministic and a nondeterministic semantics can't be equivalent

Conclusions

- ▶ Equivalence is a subtle concept
- ▶ Proofs “seem obvious” only when the definitions are right

Conclusions

- ▶ Equivalence is a subtle concept
- ▶ Proofs “seem obvious” only when the definitions are right
- ▶ Some other language-equivalence claims:

Replace WHILE rule with

$$\frac{H ; e \Downarrow c \quad c \leq 0}{H ; \text{while } e \text{ } s \rightarrow H ; \text{skip}}$$

$$\frac{H ; e \Downarrow c \quad c > 0}{H ; \text{while } e \text{ } s \rightarrow H ; s ; \text{while } e \text{ } s}$$

Conclusions

- ▶ Equivalence is a subtle concept
- ▶ Proofs “seem obvious” only when the definitions are right
- ▶ Some other language-equivalence claims:

Replace WHILE rule with

$$\frac{H ; e \Downarrow c \quad c \leq 0}{H ; \mathbf{while} \ e \ s \rightarrow H ; \mathbf{skip}} \qquad \frac{H ; e \Downarrow c \quad c > 0}{H ; \mathbf{while} \ e \ s \rightarrow H ; s ; \mathbf{while} \ e \ s}$$

Equivalent to our original language

Conclusions
