Blindness Statistics

■ Population at Large

- ☐ > 10 million visually-impaired people in U.S.
- ☐ > 1.3 million blind in U.S.
- ☐ 45 million visually-impaired people worldwide

■ Students (ages 16 -25)

- ☐ 11% of school-age children disabled
- ☐ > 4 million students
- ☐ > 20,500 blind students

Goals for Project

- Illustrate an exciting application(s) of CS
- Ample opportunities for personalization
- Integrate problem solving
- Realistic but quick to start
- Project should be accessible
 - ☐ Screen reader
 - ☐ Low vision software

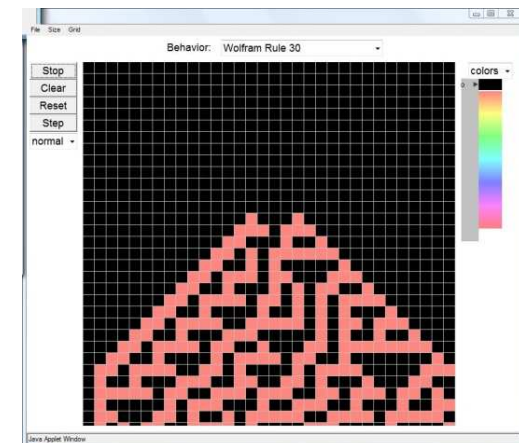

Related Work

An IM Client that Talks Back

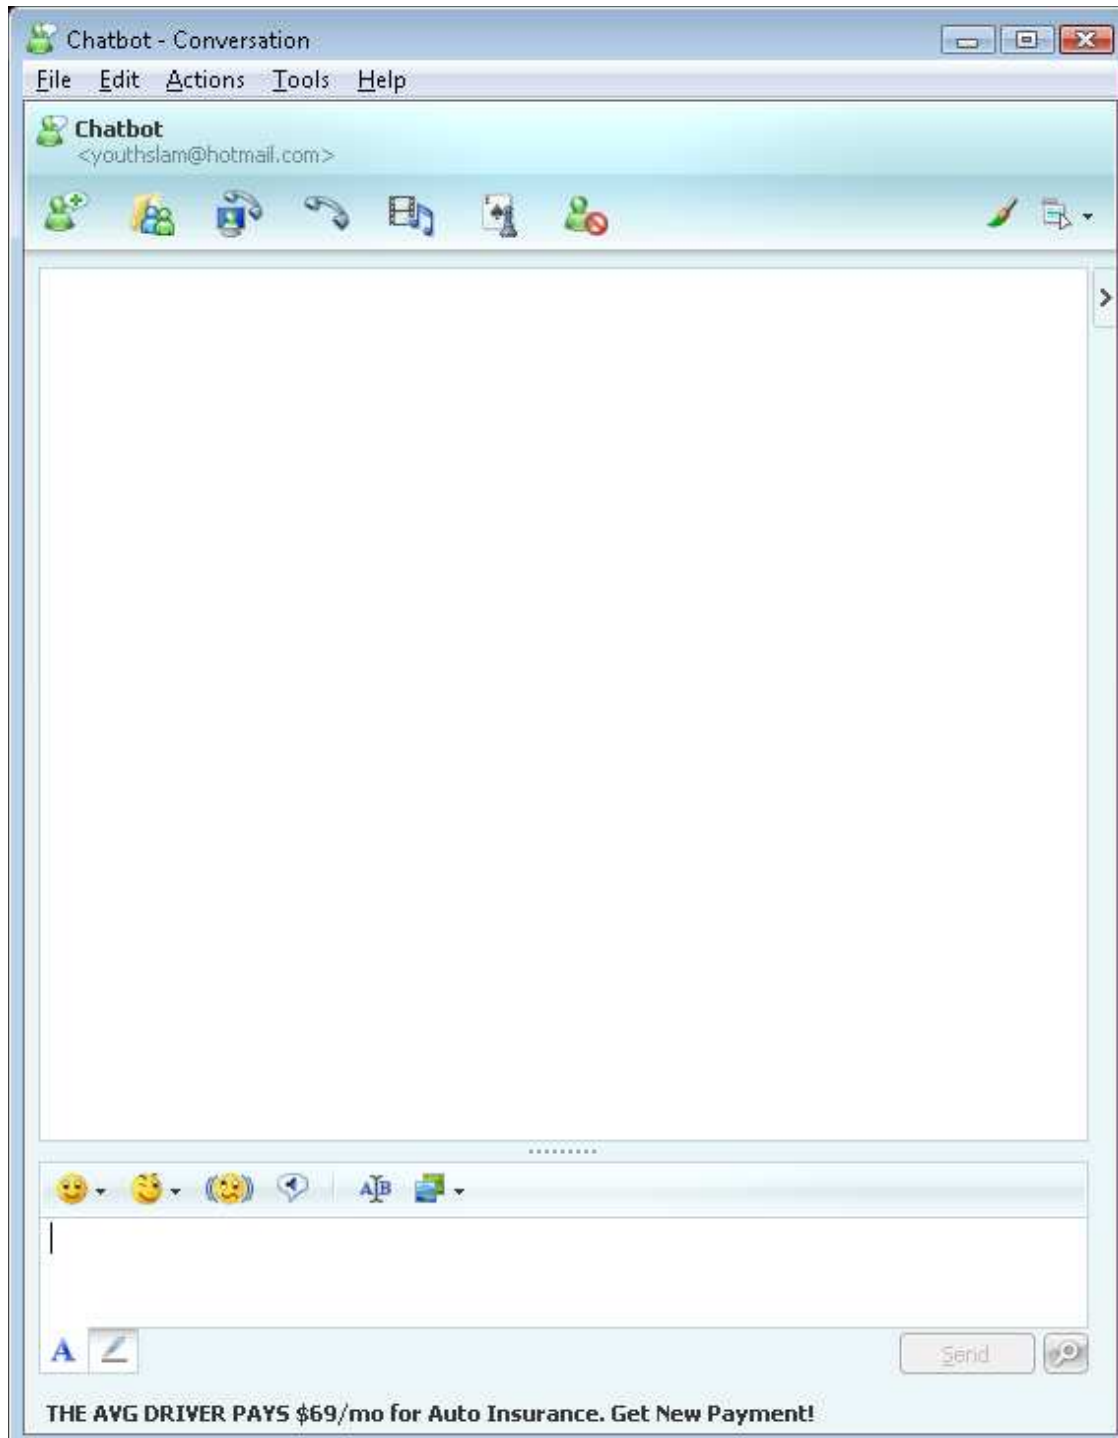

- Otherwise known as a chatbot

Students will build a fun chatbot that can talk to them (or their friends) through instant messenger. **Chatbots are software robots** capable of carrying on simple conversations. Students will be able to **create a personal chatbot** endowed with unique personas, such as those resembling a psychologist, Yoda from Star Wars, or anyone else that they can imagine. The chatbots will **draw information from the web** and be able to **answer useful questions** like "What's the weather in Baltimore?", "Who won the Orioles game last night?", or "Where's the nearest Chinese restaurant?" Students will return home with basic knowledge of **artificial intelligence, natural language processing and web programming**, along with a personalized chatbot that they can continue to use on their home computers.

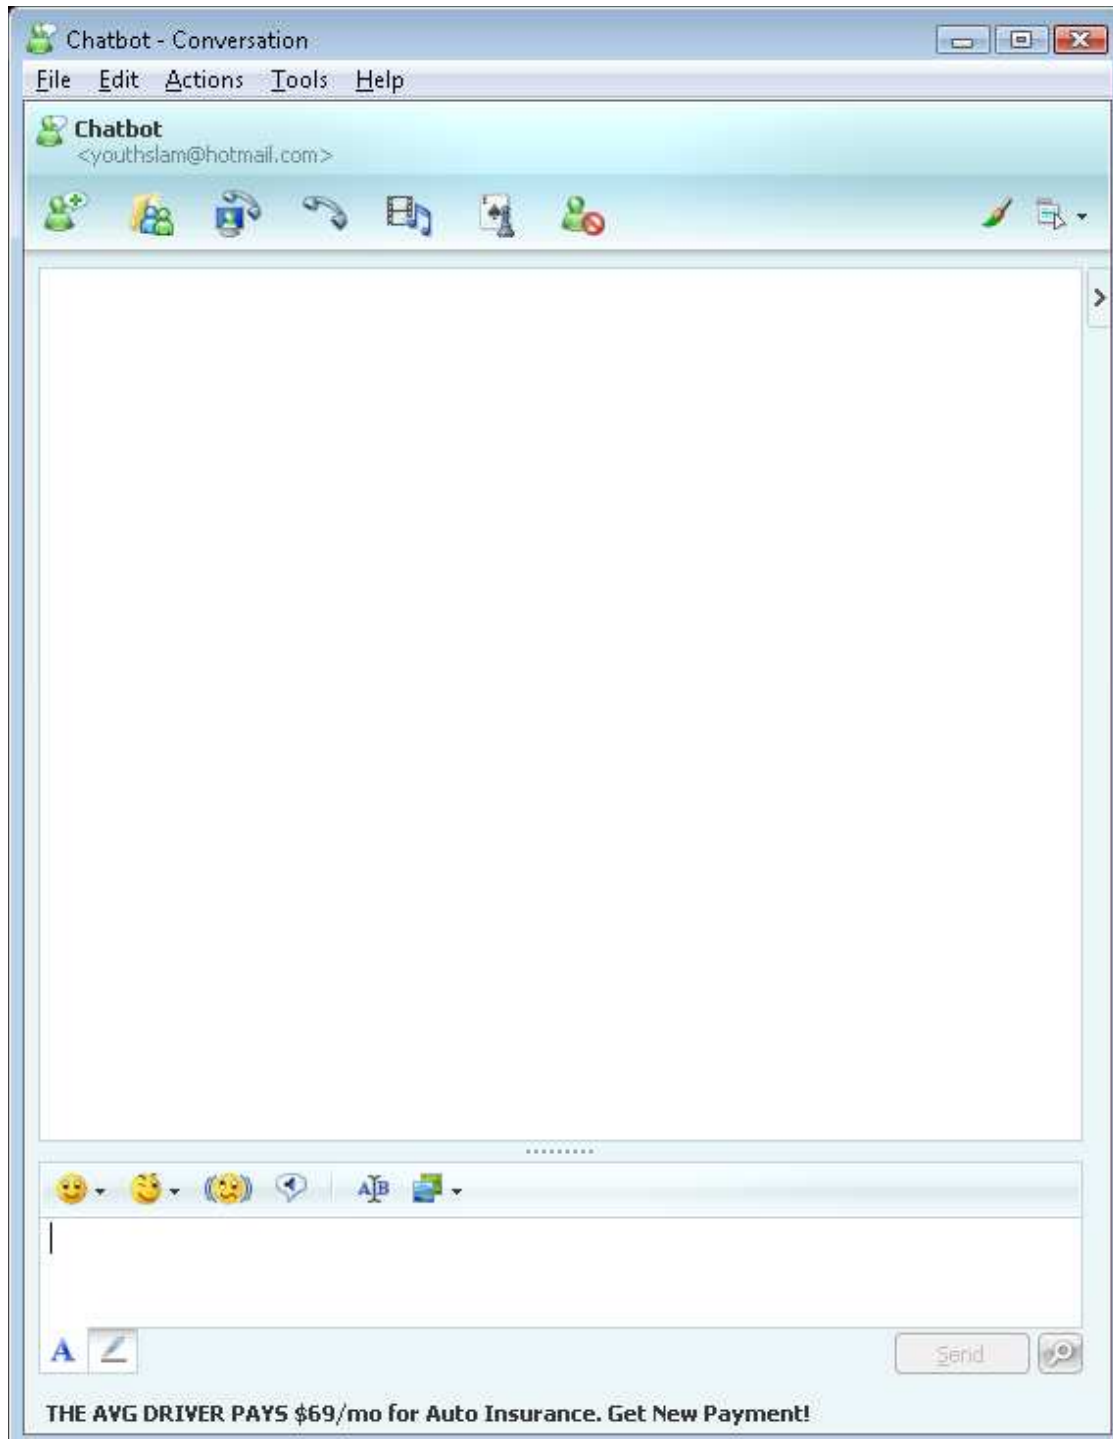

No prior computer programming experience required.

Chatbot Demo

- Created by a student
- Read by a screen reader

Chatbot Demo

Responses triggered by simple regular expressions.

Chatbots work with remote web services – today's weather, news and dictionary.

Programming from the Start¹

- Build confidence w/ realistic environment
 - Not facsimile of programming
 - Real programming
- Teaching the power of programming
- Taste of what programming is like
- Building excitement, not capacity

Instructors and Mentors

■ Many Instructors

- ☐ 1 instructor per 4 students
- ☐ Provided personal attention
- ☐ Supplemented by tutorial

■ Blind mentors

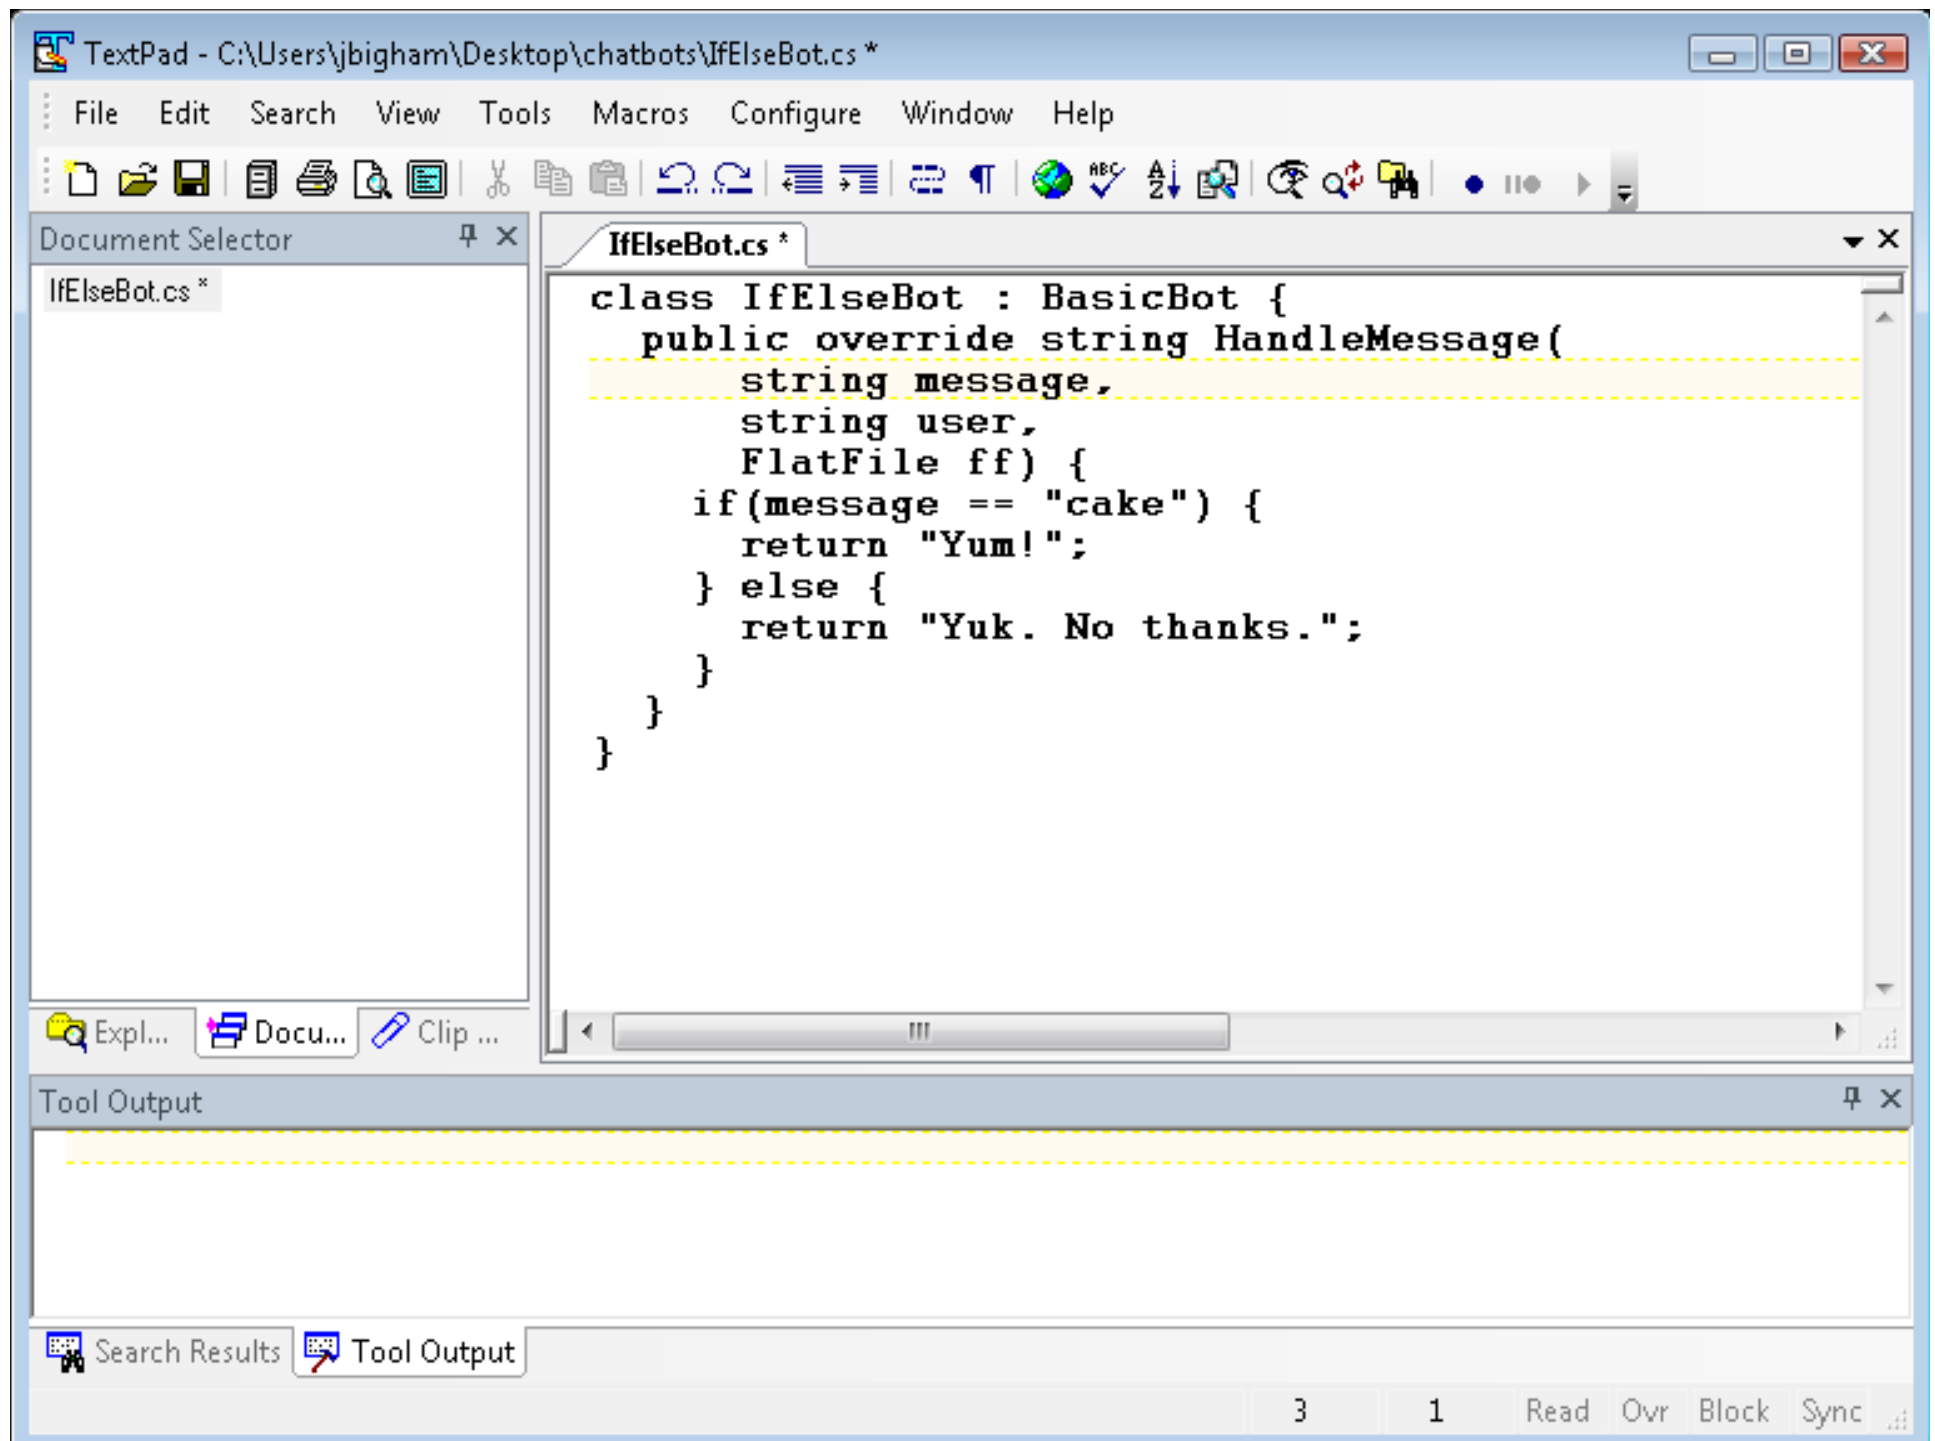

- ☐ Some knew how to use screen readers
- ☐ Incredibly helpful

Example Code

```
class HowAreYouBot : BasicBot {  
    public override string HandleMessage (  
        string message, string user, BotMemory bm) {  
        if(bm ["asked"] == "yes") {  
            bm ["asked"] = "no";  
            return "That 's great!";  
        } else {  
            bm ["asked"] = "yes";  
            return "How are you today?";  
        }  
    }  
}
```

User: Hello
Bot: How are you today?
User: Great.
Bot: That's great!

Lists
ul, ol
li

■ Unfortunately, not everything was accessible...

□ CAPTCHAS, even audio

Example 1

Example 2

Choosing Software

- Consulted Blind Programmers
- JAWS Screen Reader
- ZoomText for Students with Low Vision
- Chose accessible, free approach
 - ☐ C# on most computers
 - ☐ More readable errors
 - ☐ Curriculum on Web Page (easily converted)
 - ☐ TextPad
 - ☐ Windows Live Messenger (Formerly MSN)

Why Windows Live?

- Balance of Accessibility and Functionality
 - ☐ Most accessible IM client
 - ☐ Ability to be signed on and off often
- Chatbots compatible with many IM clients
 - ☐ Windows Live, AOL, Yahoo, Jabber (GTalk)
 - ☐ Bots can talk to friends

Lessons Learned

- Diverse set of abilities
 - Technical sophistication
 - Familiarity with screen reader
 - Preferred Accommodation
 - Screen reader (JAWS and Window-Eyes)
 - Screen Magnifier (ZoomText)
 - Sitting close to the screen
- Anyone can help
 - No prior experience required (but helpful)
 - Bring an audio splitter ☺

Results

“After the first day,
we realized that
programming is hard,
but after we got into it,
it was really fun!”

- 2 students continued after the workshop
 - Followed up over several weeks
 - Easy to set up on their own computer

2011 Update

- Reworked the Curriculum for iPhone
- Location-Aware iPhone Applications
 - ☐ where am I?
 - ☐ directions to a location
 - ☐ GPS tag

R

Short History of Chatbots

■ Eliza – a psychologist

- ☐ **User:** I am happy.
- ☐ **Chatbot:** Do you enjoy being happy?
- ☐ **User:** Yes, very much
- ☐ **Chatbot:** I understand.
- ☐ **User:** That's great
- ☐ **Chatbot:** Tell me more...
- ☐ **User:** It's really, really great
- ☐ **Chatbot:** Come, come, elucidate your thoughts.

■ SmarterChild (AIM)

- ☐ Chatbot on AOL Instant Messenger
