# EXPLORING SMARTWATCH-BASED DEEP LEARNING APPROACHES TO SUPPORT SOUND AWARENESS FOR DEAF AND HARD OF HEARING USERS

Dhruv Jain, Hung Ngo, Pratyush Patel, Steven Goodman, Leah Findlater, Jon Froehlich

# Sound recognition is at the heart of many modern Al systems.

Recent iOS 14 update introduced sound recognition in consumer smartphones.

But this release is closed-source and the implementation details are unknown.

A sound has been recognized that may be a siren.

### Two Studies

# Study 1

A **quantitative** examination of four lightweight deep-learning models to classify sounds.

# Study 2

A **qualitative** evaluation of a smartwatch-based sound awareness app with 8 DHH participants.

### Two Studies

# Study 1

A **quantitative** examination of four lightweight deep-learning models to classify sounds.

# STUDY 1

#### Goal

 Performance evaluation of four deep learning sound classification models across four architectures.

#### Models

- o Three recently released TensorFlow-Lite models: MobileNet (3.4MB), Inception (41MB), ResNet-Lite (178.3MB) and a quantized version of our model: VGG-Lite (281.8MB).
- o Also, a comparison with state-of-the-art full-VGG model (845.5MB) running on a laptop.

#### Architectures

- Watch-only, watch+phone, watch+cloud, and watch+phone+cloud.
- A commercially available smartwatch (Tickwatch Pro) and smartphone (Honor 7x) were used.

# STUDY 1 FINDINGS

Models

**Architectures** 

# STUDY 1 FINDINGS

#### Models

- o The best classification model (VGG-lite) had similar accuracy as the state-of-the-art for non-portable (VGG) but required substantially less memory (~1/3rd).
- o Accuracy of best model was 81.2% (SD=5.8%) for 20 sound classes and 97.6% (SD=1.7%) for three high-priority sounds, when evaluated on our dataset of field sound recordings.
- Among our four models, we also observed a **strict accuracy-latency trade-off:** the most accurate model was also the slowest (avg. acc=81.2%, avg. latency=3.4s).

# STUDY 1 FINDINGS

#### **Architectures**

The two phone-based architectures (watch+phone, watch+phone+cloud) outperformed the watch-centric designs (watch-only, watch+cloud) in terms of CPU, memory, battery usage, and end-to-end latency.

To complement these quantitative findings, we built and conducted a qualitative labely evaluation of a smartwatch-based sound awareness app, called SoundWatch.

#### **Customizable sound alerts** SoundWatch Hazard alarm Alarm clock Doorbell Door knock Microwave Speech Car horn

Support for four architectures with deep-learning model running on either watch (watch-only), phone (watch+phone), or cloud (watch+cloud, watch+phone+cloud).

SoundWatch processes the sound locally on the watch or phone and, in the case of the cloud-based architectures, only uploads non-reconstructable mel-spectrogram features.

# STUDY 2

#### Goal

o Gather user feedback on our system results and the SoundWatch app.

#### **Participants**

o Eight DHH participants (3 women, 3 men, 2 non-binary).

#### Method

- o Campus walkthrough with the SoundWatch app in three contexts: a lounge, a lab, and a bus stop.
- Post-trial interview on the experience and other technical considerations—*e.g.*, desired accuracy-latency tradeoff, thoughts on the four SoundWatch architectures.

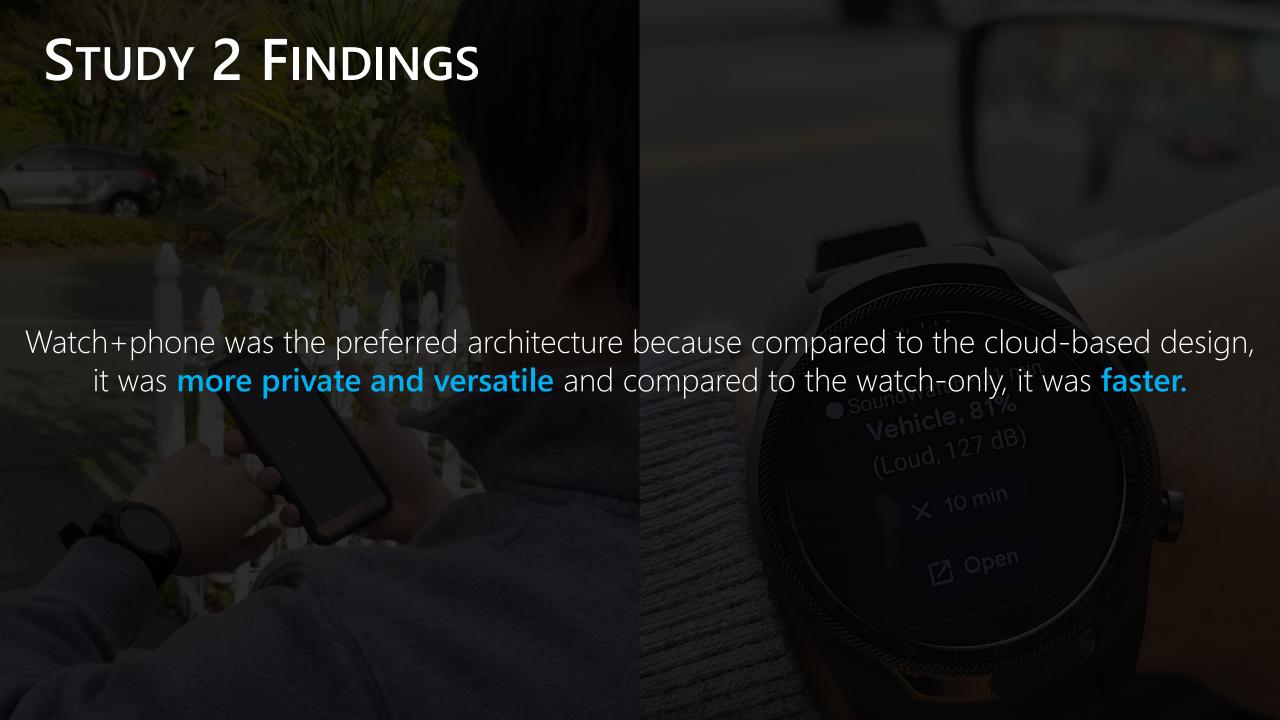

### STUDY 2 FINDINGS

Participants wanted **minimum delay** for urgent sounds (e.g., car honk, water running) and **maximum accuracy** for non-urgent sounds (e.g., speech, background noise).

SoundWatch · Now
Water Running, 83%
(Loud, 113 dB)

× 10 min

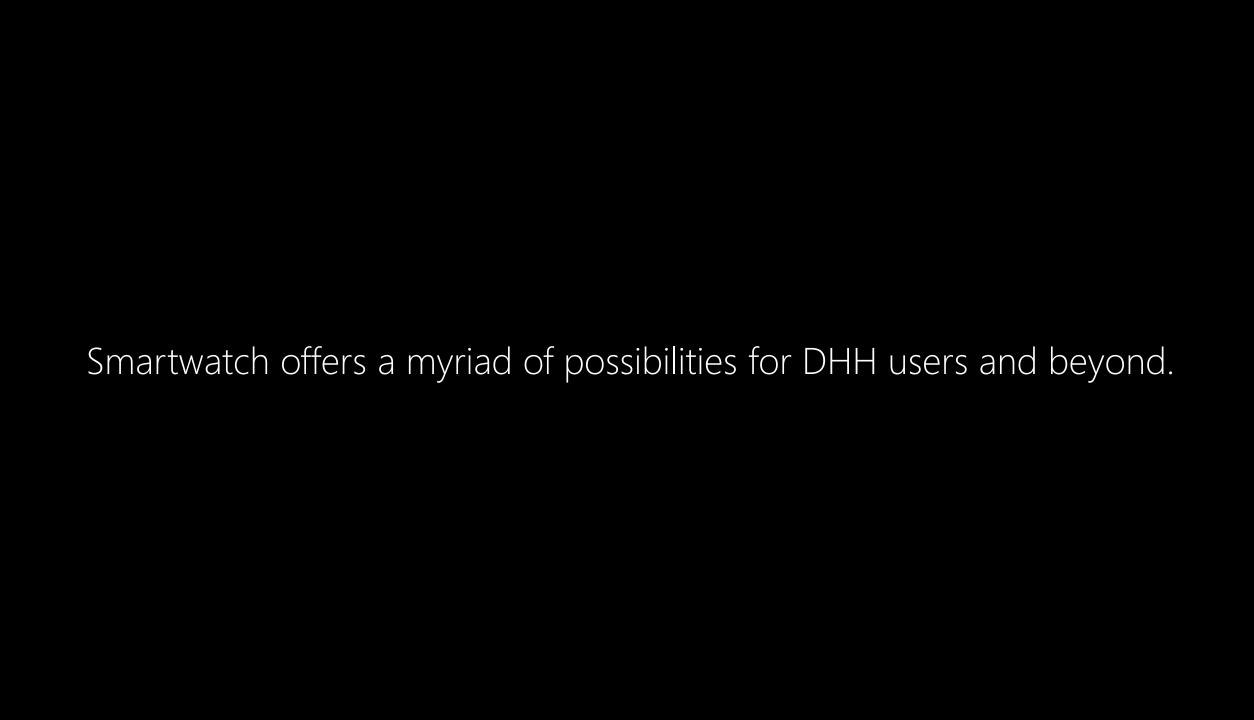

# How well does a **smartwatch-based sound classification** tool need to perform?

Needs further study...

### RECOMMENDATIONS

- 1 Explore usage in the field.
  But this introduces ethical and safety concerns.
  Increasing transparency may help.
- 2 Explore showing multiple "possible" sounds.
- **2** Explore end-user customization.
- Explore end-user interactive training of the model—e.g., Wu, CHI '20. But this may be tedious if the sound is inaccessible to DHH users.

Please refer to the paper for more interesting ideas on **smartwatch + sound** feedback.
